# Sometimes, Less Is **More.**

Fogmaster's new 9031 tank insert saves expensive liquids so **you save money.**

**How?** When the standard 1-gallon tank is too big for a small treatment, a little job can waste expensive chemicals.

**The Solution:** Put a #9031 1 Quart Small Application Tank insert in the one-gallon tank.

A gallon displacement becomes a one quart displacement.

Then add the exact amount of chemical you need for the job. No waste. So you save chemicals and money. More convenient, too. Right to the last drop.

The Fogmaster 9031 Tank Insert's 32-ounce capacity has indentations at 4-ounce intervals. That way, you always know how much liquid to add.

And a small sump in the bottom makes sure it'll be completely emptied.

***No waste. No leftovers. No chemical degradation in storage.***

Total efficiency to the last drop.

Because when it comes to saving fogging liquid, less is often more.
